FARRELL EQUIPMENT & SUPPLY CO.

TK PRODUCTS

have been manufacturing quality concrete surface treatments for over 60 years. Their products aid in ***curing, protecting, restoring or beautifying concrete*** for commercial and residential projects.

TK ONE STEP is a clear, penetrating, acrylic copolymer, siloxane blend, that acts as an easy single-step application to cure, seal, and weather proof new and existing concrete. It eliminates excess steps for curing and protecting concrete, allowing faster return to service for the treated areas, when compared to traditional curing or sealing products. Additionally, the siloxane addition improves the concrete's water repellency, protecting it against the detrimental effects of freeze/thaw cycles and salt intrusion.

$

TK290 FINAL SEAL is the first choice when it comes to a penetrating water repellent for concrete and other porous surfaces. It protects from salts & freeze-thaw conditions that can damage the surface.

Benefits:

- Available in Low VOC (TK 290 VOC)
- Maintains the surfaces slip resistance (coefficient of friction)
- Will not alter the appearance of the substrate and will not yellow
- Outperforms typical water repellents due to its superior penetration and bonding properties
